

4.1.32 :  $x^i \rightarrow x'_i$

• Missing prime'

4.1.48

$$\alpha' P^\mu P_\mu = 2\alpha' p^+ p^- + 2\alpha' \sum_{i=1}^{D-2} p_i p_i$$

This should be 1

(4.3) Paragraph 1 : He has  $\alpha_0 = -1$

Should be  $\alpha_0 = 1$

(2.2.8)

$$J^{\mu\nu} = - \int_a^\pi (x^\mu p^\nu - x^\nu p^\mu) d\sigma$$

extra minus sign.

Sentence after (4.3.3.)

"derivation being identical to that given in chap 2"

There is no derivation in chap 2.

Should be chapter 3

(4.3.5)

$$J^{+-} = 2\alpha' \tau p^+ \int_0^\pi d\sigma P^- - p^+ \int_0^\pi d\sigma x^-$$

missing a factor of  $\frac{1}{\pi}$  from  $P^+ = \frac{p^+}{\pi}$

Since  $\frac{1}{\pi} \int_0^\pi d\sigma x^- = q^-$

(4.3.4) & (4.3.5) : What happened to  $x_0^\pm$  term?
